Experience

Survey Programmer

NS MATRIX SERVICES PVT. LTD. • New Delhi, Delhi
08/2022 - 11/2023

- Design and implementation of survey based on the materials provided by the Client.
 - Collaborated effectively in team projects and paid attention to detail while developing surveys.
 - Working on the Decipher toolkit, utilizing XML, Python, HTML, CSS, Javascript, and jQuery
-

Projects

Employee Management

- Constructed a robust Employee Management System using Python's Django framework, combining powerful backend functionalities with an elegant frontend design using Bootstrap.
- The application encompasses diverse features, such as employee registration, profile management, and an intuitive dashboard for efficient data visualization.
- Leveraged Django for seamless database interactions with SQLite and use of Bootstrap ensures a responsive and visually appealing interface.

Currency Converter app

- Designed an intuitive user interface with HTML and CSS for optimal user experience.
- Utilized JavaScript to create interactive features, allowing users to input amounts and convert between different currencies.
- Implemented API integration for live currency exchange rates, demonstrating proficiency in web development.

- The Currency Converter app enables users to input amounts in one currency and instantly convert them to another.

Amazon Clone

- Created a comprehensive Amazon clone project leveraging HTML, CSS, and JavaScript.
- The user interface features realistic product listings, dynamic cart functionalities, and a seamless checkout process.
- This project demonstrates a holistic understanding of front-end development for a fully functional e-commerce experience.

YouTube Clone

- Created a comprehensive YouTube clone project that emulates the core functionalities of the popular video-sharing platform.
- Key features include a user-friendly interface with video uploading capabilities, seamless video playback, user authentication for personalized experiences, and a comment section for engaging discussions.
- The YouTube clone project stands as a testament to a holistic approach in creating a feature-rich video-sharing platform.

Weather APP

- Crafted a Weather App with a seamless blend of HTML, CSS, and JavaScript, providing users with a visually appealing and interactive interface.
- The app enables users to check current weather conditions by inputting their location.
- Upon entering a location, the app fetches data from the API and dynamically displays details such as temperature, humidity, and weather description.

Skills

Python, JavaScript, Django, Bootstrap, Core Java, SQL, HTML-CSS, GitHub, DSA

Certificates

Hackerrank Python(Basic), Hackerrank JavaScript(Basic)

Languages preference

English, Hindi
